

# Concrete Welder

Concrete Welder combines polymers with specially-treated stone and sand to create even faster rapid-setting, long-lasting and even stronger load carrying capacities. Repairs require specialized equipment and trained technicians for application.

## Where to Use

- Bridge Decks
- Potholes
- End Dams
- Approaches
- Raveled Areas
- Spalled Areas
- Cracked / Broken Areas
- Alligatored Areas
- Utility Cuts or Dig-Outs
- Storm Drains & Manholes
- Trip Hazards
- Broken Curbs

Fill Void with Stone

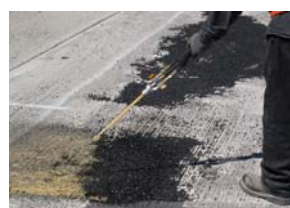

Inject Concrete Welder

Apply Sand

Finished Repair

## Benefits

- Creates durable, long-lasting repairs
- Seals and waterproofs
- Provides smooth, high-traction surface
- Requires no digout
- Repairs precisely to-grade
- Odorless and vaporless
- Unaffected by water, fuel or oil and hot or cold temperatures
- Easily repairs wide and narrow cracks
- Ready for traffic in an hour with minimal preparation required
