Soy Polymers Provide Cost-Effective, Enhanced Asphalt Millings

As spring weather begins to thaw out most of the United States, motorists are given a constant reminder of Old Man Winter as they dodge severe potholes and cracks in roadways. The United Soybean Board (USB) and the soybean check off are working with BioSpan Technologies of Washington, Mo., to help alleviate those traffic concerns. Significant funding from the check off has contributed to the development of unique soy-based polymers, which are the key ingredients in BioSpan Technologies, Inc. asphalt millings restorer, Activate™.
